

Key Speaker: *Óscar Huarte*

Short CV: I have a degree in Business Administration and an MBA from the Instituto de Estudios Superiores de Empresa, IESE (Barcelona). I have worked in sectors such as pharmaceuticals and footwear, and for almost 30 years I have been with Lizarte, a second-generation family business, of which I am the CEO. I have always been committed to the environment and sports sponsorship.

Main research and industrial topics: Lizarte has been in the car aftermarket for 50 years, always offering remanufactured products. Our R&D department is particularly strong in reverse engineering applied to the remanufacturing of mechatronic auto parts, which has allowed us to help OES to remanufacture and test products such as: alternators with start-stop systems or the electronic part of a truck gearbox.

We are diversifying, both within the IAM and outside it, such as in the wind energy sector.
