**The millennial tradition of the Balinese and Indonesian phytotherapy** school has over the centuries, represented the main source of exports of spices, essential oils, vegetable oils and butters all over the world.

The MAWE Corporation Ltd of Bali, began in 2005 to research these rare substances, taking from the ancient texts of the Balinese school suggestions on how to use them in a beneficial way on the person.

Using, for production in Europe, a renowned Italian cosmetic laboratory, making use of the suggestions of a talented expert cosmetologist, has started the production of some exclusive products, containing oils and substances typical of Indonesia.

The substances that make up the products of the "MAWE Body Line" & "MAWE Home Line" ranges are all of certified origin, MOSTLY COMPOSED OF VEGETABLE SUBSTANCES, tested by specialized laboratories and mixed with care and attention.

## **THE VIRGIN PRIMORDIAL VOLCANIC CLAYS BY B@LI**

### History, origin and characteristics

The 17,000 islands of Indonesia extend for about 5100 kilometers, almost the same distance as between London and New York.

Its entire length develops on the Pacific "Belt of Fire", a 40,000-kilometer belt entirely subject to intense volcanic phenomena.

The island of Bali, located in the center of this "belt", is influenced by the volcano Gunung Agung, which is located in the southeastern part of the island.

On the slopes of the volcano there are vast cultivated fields, which produce a very rich quantity of vegetables: from vegetables to tropical flowers of all varieties, nourished by the volcanic substances present in the soil.

Near the vent is the animist Hindu temple Pura Besakih, around which there are deposits of primordial virgin clays, produced by the millenary eruptive activity of the sacred volcano.

These primordial clays have been used for hundreds of years by "Mangku" (Hindu priests or Brahmins), a sort of shamans or "men of magic", who use them to successfully cure an innumerable amount of ailments.

**The Mawe Corporation ltd of Bali**, thanks to the particular friendship of the superior "Mangku" of the Pura Besakih temple, has obtained the exclusivity for the use of this primordial virgin clay and consequently allow the diffusion of this beneficial substance in the world.

## CLAY THERAPY

### What it is - how it works - what it is used for

Recent research methodologies have been able to demonstrate that by applying primordial clay to areas of the body subjected to trauma or suffering from various types of pathologies, surprising benefits can be obtained.

Furthermore, if substances that intensify the effect are added to the primordial virgin clay (the most effective), the results are even more evident.

Traditional clay therapy is now in common use and the benefits are disclosed by numerous studies carried out by medical specialists.

The virgin primordial clay from **Gunung Agung volcano's Bali** is by far one of the most effective clays.

**The primeval virgin clays** are made up of healing volcanic ash found near ancient volcanoes, beneath the soil surface. They are defined as virgins, because they are extracted from uncontaminated places and never used on humans. They are rich in magnesium and trace elements, as well as organic plant matter which, together with iron oxide, determines its pale green color.

They detoxify, restore mineral balance and act as absorbers of traumatic effects

## HOW CLAY THERAPY WORKS:

the ion exchange action carried out by the clay (it absorbs the "malefic" substances and releases essential mineral salts) helps to solve various problems of various kinds, both as a result of trauma or for epidermal problems.

### IMPORTANT:

The clay after use must always be thrown away.

Do not touch the clay with metals, but apply it with a wooden or plastic spatula.

If it is thick and difficult to apply, it can be softened with a little cold boiled water.

It is good that when you start a cycle of applications it continues, with regularity and constancy, at least 2 days after the problem is resolved.

## "PRIMORDIAL VIRGIN CLAY"

Of the volcano Gunung Agung in Bali

With anti-trauma cooling effect

Poultice with virgin primordial clay, suitable as an adjuvant to natural therapies, for the reduction of trauma caused by sprains, muscle strains in the limbs.

The Cooling Primordial Clay has been prepared to make it spreadable and ready to use.

Two substances have been introduced into it that intensify its effect: natural Menthol and Mint essential oil, natural Camphor and Camphor essential oil.

These 2 fundamental substances cause intense and prolonged COLD to develop upon contact with the skin, favoring the restoration of peripheral blood circulation, the reduction of swelling and the reduction of post-traumatic painful symptoms.

**It is used as a natural mass-physiotherapy adjuvant in cases of tendonitis, sprains, oedemas, where the cold is beneficial.**

## USE:

apply a layer of product with a thickness of 1 or 2 mm to the affected part, spreading the application at least 2 or 3 cm outside the affected part, use a wooden or plastic pallet to spread the product.

Cover the treated area: first with a transparent film (such as Domopak), in order not to dirty the clothes, then with a cotton bandage or with a sock, to keep the poultice in place.

Leave it on for about 5/6 hours, then remove the plastic with the clay residues (throw it away because it is now exhausted), wash the part with water and repeat a new application, following the same procedure.

During the night, apply before bed, starting with the same procedure in the morning.

**The product should be applied as soon as possible from the traumatic event, it is advisable to have a package available, for immediate use, to be kept in the first aid box.**

## WARNINGS:

**DO NOT USE IN THE PRESENCE OF EXPOSED ULCERATIONS OR WOUNDS AND IN THE EVENT OF VERIFIED INTOLERANCE TO A SUBSTANCE.**

**This product is not considered a medicine. can be used as an adjuvant to support or supplement any mass-physiotherapy therapy.**

However, it has been ascertained that, normally, the painful symptoms diminish significantly after a few hours from the first application, the reduction of edema occurs, based on the severity of the trauma, already after 2/3 days from the start of the applications. It is advisable to continue the treatment at least another 2 days after the disappearance of the painful symptoms, to complete the treatment effectively.

**The container used is strictly in food glass and with a paper label, to keep the product intact over time, reducing the spread of plastic.**

**INGREDIENTS:** Solum fullonum (argilla primordiale vergine) – Aqua steril - Helianthus annuus – Menthol - Cinnamomum canphora – Mentha Piperita - Methylchloroisothiazolinone, methyisothiazolinone – Linalolo Citronellolo D-Limonene.

Packaging: glass jar 300 ml - 500 ml
