

Key Speaker: *Daniela Fontana*

Short CV: She serves in Comau in the E-Mobility Competence Center, which has the aim of developing automated systems for manufacturing of battery packs, modules, cells and e-motors. She is responsible for the management of the funded projects of her group and industrial chair of the Working Group 4 of BEPA / Batteries Europe “Cell Design and Manufacturing”. Before joining Comau, she served as R&D Manager at Lithops and FAAM Research Center, focusing on the development and scale-up of Li-ion technologies, from active material synthesis to cell manufacturing and recycling.

Main research and industrial topics: Development and validation of automated processes for battery cell manufacturing, both for state-of-the-art and next-gen batteries; support to technology developers in defining and scaling up their solutions from laboratory to pilot and production scale.
