

Key Speaker: *Dr. Mitsutaka Matsumoto*

Short CV: Mitsutaka Matsumoto is the Deputy Director of AMRI (Advanced Manufacturing Research Institute) at AIST (National Institute of Advanced Industrial Science and Technology), Japan. Since he started working with AIST in 2006, he has been working on research and development of remanufacturing and product life cycle engineering. He has led research projects on circular economy both for industry clients and publicly-funded projects.

Main research and industrial topics: His research has been focused on industrial engineering and system technologies for remanufacturing. He is currently focused on applying manufacturing process technologies to remanufacturing by collaborating with colleagues, research teams, and industrial partners. The process technologies include machining, additive manufacturing, coating, testing, and information technologies.
